

The management of basal insulins in the context of biosimilars, a must!

You are invited to join a webinar on the “**The management of basal insulins in the context of biosimilars, a must!**”, hosted by diabetes specialist, Steve Chalifoux, R.N. You will have the opportunity to participate in a discussion about the latest research on diabetes and diabetes treatment.

Following this webinar, participants will be able to:

- Recognize the difference between a generic drug and a biosimilar
- Understand the role and importance of stakeholders involved in the transition to biosimilar insulins
- Recognize the clinical and technical issues in this insulin change/transition
- Be familiar with clinical tools that can help in that transition process

The webinar will be presented 4 times (with 3 French dates and 1 English date).

WHO IS STEVE CHALIFOUX?

He is a clinical nurse and certified diabetes educator in Canada, who works as a diabetes pivot at the CISSS de Laval at the Cité-de-la-Santé hospital. With 18 years of experience in the field of diabetes, he is committed to collaboration and sharing knowledge with his peers as well as with his patients. He actively contributes as a trainer, lecturer as well as a member of several advisory and scientific committees at regional, provincial, and national level. He is also the mind behind the **Diabetes Toolbox** – an award-winning web application that helps healthcare professionals across Canada understand and better manage diabetes.
